

NEW PRODUCTS 2009

PEDAL POWER VERSA

With an outrageous 13 isolated output sections, Pedal Power Versa is the most versatile power supply made today. Now you can eliminate those noisy wall warts from your rig with a single solution. Versa can easily power all your 9-volt classics, plus today's high-current effects including TC Nova, Eventide, Radial Tonebone, MXR, Electro-Harmonix, and many more. Two dedicated and isolated AC outputs can power everything from a MIDI footcontroller, to a Whammy, wireless unit or vacuum tube overdrive. Versa uses our exclusive low-noise toroidal transformers, and is isolated, filtered, regulated and short circuit protected. Sound better today and get the

most advanced power supply ever made, Pedal Power Versa. Cables and detachable AC power cord included.

PEDAL POWER ISO•5

ISO•5 gives you the same pro performance as our larger Pedal Power units, but at a price that won't break the bank! With 5 completely isolated, regulated, and filtered output sections, you can power vintage stompboxes right along side high-current effects like the TC Nova or Eventide series. Plus with a dedicated 18V out, you can easily power all MXR series effects and many others. Unlike most small power supplies that use noisy digital switching, or wall warts with no isolation between outputs, ISO•5 uses our exclusive low-noise toroidal transformer, and is short circuit protected just like Pedal Power 2 Plus and Versa! Cables and detachable AC power cord included.

ISOLATED DC OUTPUTS					
9V	9V	9V	9V 12V	18V	
400mA					

GIGGITY

Giggity isn't just an overdrive or boost pedal. With its unique Body and Air tone-shaping circuits, Giggity can help you fine-tune your overall sonic footprint. Placed after your pedalboard and before an overly clean or sterile amp, you can add a little dirt, and thicken up the bottom by adding Body. Placed first in the signal chain, you can add a little Air and shimmer to a dull sounding guitar. Also features a 4-position tone/gain selector which allows you to pick the exact "amp" voice you're looking for. Like all Voodoo Lab effects, switching is true bypass.

SPARKLE DRIVE MOD

Sparkle Drive MOD delivers all the overdrive tones of the original Sparkle Drive, but with a twist. Using the MOD switch, you can select the stock 808-based circuit, or pick from 3 completely different custom modifications all in an instant! Whether you need more gain, tighter bass response, or a thick and searing lead tone, Sparkle Drive MOD can give it to you. Features also include a unique “clean” control that allows you to blend in a boosted direct signal restoring the attack and feel, and true bypass switching.

PEDAL SWITCHER PX-8

Pedal Switcher PX-8 gives you 8 true bypass loops using the finest gold relays sealed in nitrogen. Now you can use all those great classic and modern stompboxes without destroying that pure “straight to amp” sound. PX-8 features a compact design saving you valuable pedalboard space, a TRS insert, buffered and passive inputs and convenient 9VDC operation. When controlled via MIDI, you can store preset combinations of pedals and recall them with a single footswitch.

PEDAL SWITCHER PX-4

Pedal Switcher PX-4 gives you 4 true bypass loops using the finest gold relays sealed in nitrogen. Just like the larger PX-8, you can use all your vintage and modern stompboxes without destroying that pure “straight to amp” sound. PX-4 features an

ultra compact design saving you precious pedalboard space and convenient 9VDC operation. When controlled via MIDI, you can store preset combinations of pedals and recall them with a single footswitch.
